Habitat

The Poison Mantis Frog lives in the wild in China.

The frog lives in swamp areas near to ponds and on river banks.

It likes to keep its skin cool so it rolls in the swamp mud to keep the sun off its skin.

Behaviour

The Poison Mantis Frog uses poison to kill its prey.

This fearsome froggy likes nothing better than to eat Boonkees and Snorks.

It uses its strength and venom to kill its food.

It has a keen sense of hearing that it uses to tell that predators are coming.

Appearance

The Poison Mantis Frog looks scary! It has a green head with large black eyes and large feelers sticking out. These help it to feel around in the mud for food.

It has a large strong body, which is a muddy brown colour that can stay hidden in the swamp. It has smooth skin to stop mud getting stuck on it which keeps it healthy.

This beast has powerful legs and webbed feet with claws on its toes which means it can chase after its prey very easily in the swamp.

The Poison Mantis Frog also has a long tail which it taps on the ground to trick small animals out of their hiding places.

Lifecycle

The Poison Mantis Frog lives up to 25 years old in the wild.

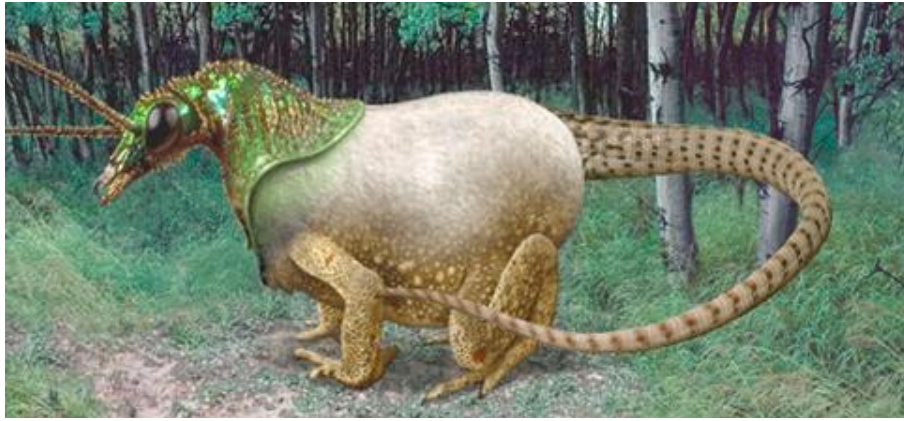

The females lay eggs which turn into tadpoles and they usually care for their young until they are 2 years old.

Did you know?

The Poison Mantis Frog can shoot poison up to nine meters away?

Yikes!

If you are heading to swamp land in China, you had better watch out for this brilliant beast!

If you have ever wondered about the fascinating Poison Mantis Frog, read this report to find out everything there is to know...

Habitat

The Poison Mantis Frog lives in the wild in China – a large country in Asia.

The frog makes its home in swamp areas near to ponds and on river banks.

It likes to keep its skin cool so it rolls in the swamp mud to keep the sun off its skin.

Behaviour

The Poison Mantis Frog is a venomous creature, which means that it uses poison to kill its prey.

This fearsome froggy likes nothing better than to munch on Boonkees and Snorks which are both very dangerous creatures themselves.

The Poison Mantis Frog is perfectly adapted to its swamp home and uses its strength and venom to kill its food.

It has a keen sense of hearing that it uses to sense predators looking to attack it.

So, there you have it – if you are heading to swamp land in China, you had better watch out for this brilliant beast!

Appearance

This killer creature looks fearsome! It has the green head of a mantis with large black eyes and large feelers sticking out of its head. These help it to feel around in the mud for food.

It has a large strong body, which is a muddy brown colour, which helps the Poison Mantis Frog to camouflage itself in its swampy habitat. It has developed smooth skin to stop mud getting stuck on it and that keeps it clean and healthy.

This large waterside beast has powerful legs and webbed feet with claws on its toes. This is very helpful when moving around its muddy home territory and means it can chase after its prey very easily.

The Poison Mantis Frog also has a long, snake like tail which it taps on the ground to trick small animals out of their hiding places.

Lifecycle

The Poison Mantis Frog can live up to 25 years old in the wild. Just like frogs found in Britain, the Poison Mantis Frog is an amphibian. Females lay eggs which hatch into tadpoles. They usually care for their young until they are 2 years

Did you know?

The Poison Mantis Frog can shoot poison up to nine meters away?

That's one sharp shooter!
